Test Method Decorators

In the VeriSoft Framework, there are a few test-level method decorators:

1. **@Test** - Is a JUnit annotation to mark this method as test method. All JUnit 5 annotations apply. See JUnit 5 documentation on annotations
2. @TestDescription - Adds add a test description to the report mechnisms
3. @DisplayName - Will change the name of the tests for most of the integrated reports, instead of the method name.
4. @XrayIdentifies - Will report the result of the test to Jira according to the identifier specified.
